

X-Tra Lift

The Smart Solution

X-Tra-Lift - The Smart Solution

Hauling items in a truck that are heavy and bulky just got easier. The X-Tra-Lift makes the traditional pick-up live up to its name. Aesthetically pleasing to the eye, the patented X-Tra-Lift is a very practical and universal lifting device for OEM and aftermarket applications. The lift allows you to transport recreational vehicles, large motorcycles, appliances, industrial machinery and equipment, product delivery, and anything else that would fit in the pick-up box.

The X-Tra-Lift is stable throughout its entire cycle. This makes loading and unloading at a loading dock possible when the carrier is placed securely onto the dock itself. The X-Tra-Lift carrier quickly detaches by simply removing two retaining pins from the forward end of the carrier. This allows more than one carrier to be used, or to use the existing pick-up box if so desired.

The Details...

When mounted on a 1-ton heavy-duty truck, the hydraulic powered X-Tra-Lift can pick 1,300 pounds (600 KG), when evenly distributed across the carrier (2,000 lb version now available). The width of the carrier is 48" allowing the transportation of 4' x 8' sheets of plywood or drywall in the 8-foot version. A short box (6 foot) version is also available. Currently the X-Tra-Lift is designed to fit a truck bed for GMC, Ford or Dodge Daimler Chrysler trucks. It fully cycles in approximately 1 minute. The X-Tra-Lift is constructed of 70,000-yield steel tubing and weighs 740 pounds. The X-Tra-Lift has undergone extensive strain gauge testing to ensure a quality, long lasting operational life. Installation is relatively easy for an aftermarket installer or for an experienced hobbyist.

Estimated install time is 10 hours

Elkhart, Indiana • (574) 596-5331 • sales@startracks.org

The X-Tra-Lift has numerous options available. An optional remote control key fob is available with a range of 200-feet. A variety of carriers are available with a steel, aluminum or open deck. A personal water craft carrier is also available. Many light packages are also offered to mount on the top bar of the X-Tra-Lift.

The carrier of the X-Tra-Lift can be modified to fit your needs by adding a motorcycle wheel chock, extra tie-down rings, or by adding casters to the bottom of the carrier to allow easy movement when detached from the X-Tra-Lift.

The standard paint for the X-Tra-Lift is a black crinkle coat finish. However, other colors and finishes are available as an option.

The X-Tra-Lift is manufactured in the United States by a premier manufacturer of hydraulic truck mounted equipment such as articulating and telescoping cranes, service bodies, hooklift loaders, and air compressors.

- Potential uses:**
- Motorcycle*
 - Golf cart*
 - ATV*
 - Snowmobile*
 - Personal Watercraft*
 - Camping equipment*
 - Lawn mower*
 - Snow blower*
 - Tiller*
 - High pressure sprayer*
 - Welder*
 - Generators*
 - Walk-behind equipment*
 - Stump cutter*
 - Building supplies*
 - Vending machines*
 - Video Games*
 - Appliances*
 - Portable toilets*
 - Furniture*
 - Product delivery*
